

ASSIGNMENT - 1

1.Steps to download and install WordPress:

Below are the step by step process to download and install WordPress.

Step 1: Download WordPress

Click on below link to download WordPress.

<https://wordpress.org/download>

Step 2: Extract zip file

Now, you need to extract compressed (zipped) folders. Right click on zip file and click to "Extract All...".

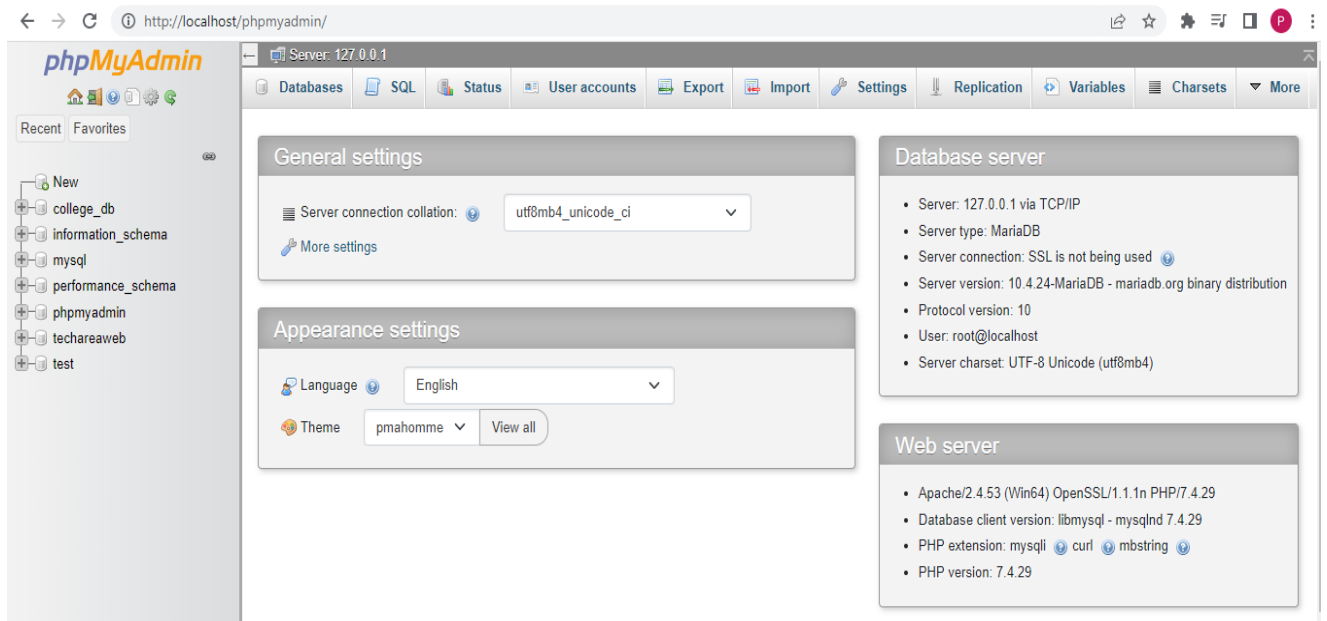

after successfully extract copy wordpress folder and paste in htdocs.

```
C:\xampp\htdocs\wordpress
```

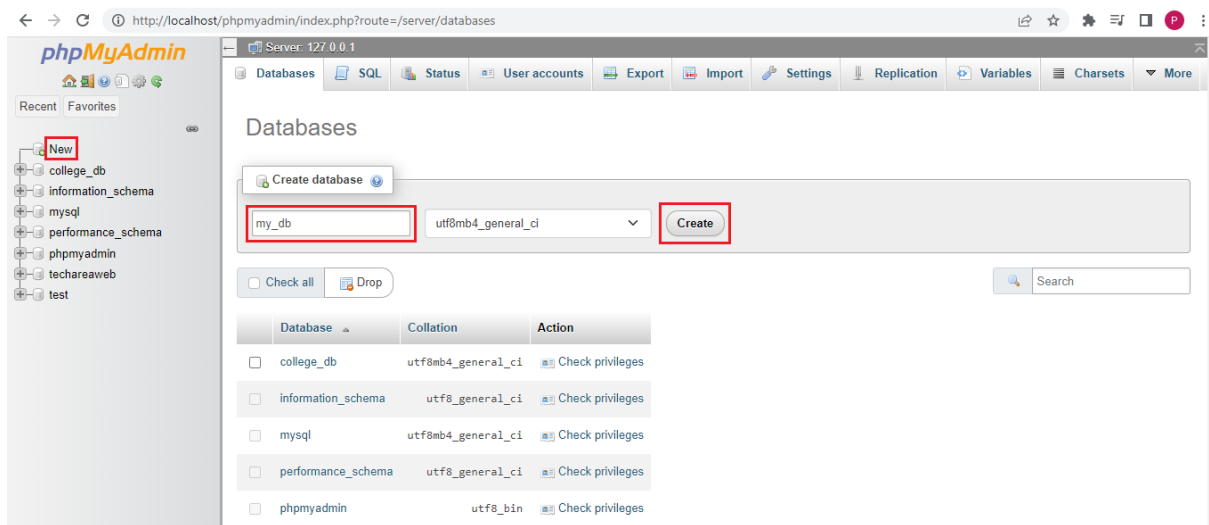

Step 3: Create the Database

Now, you need to create the Database.

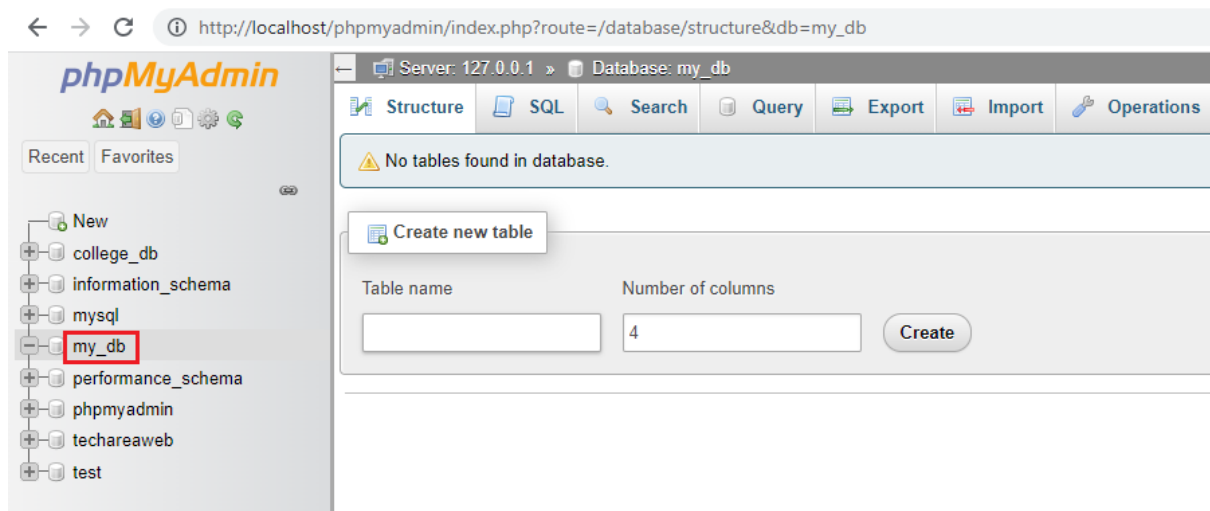

```
http://localhost/phpmyadmin/
```

Click on “New” enter “database name” and click on “Create” as shown in figure.

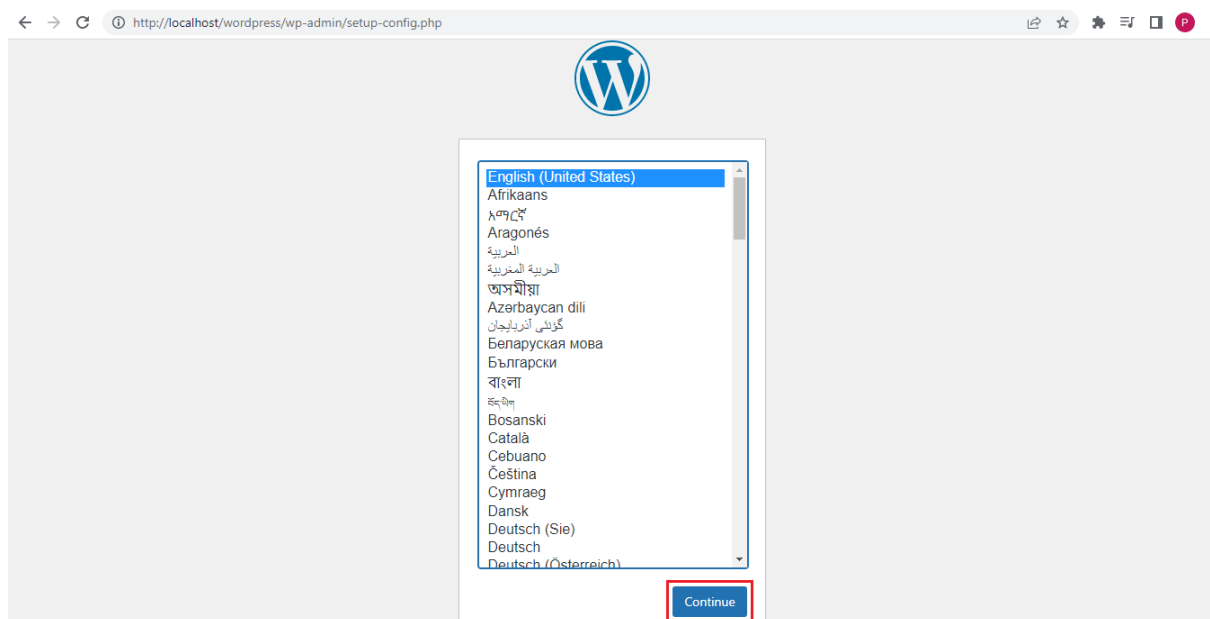

The database “my_db” has been created successfully.

Step 4: Run Installation

Use below url to run the installation.

<http://localhost/wordpress>

Choose language then click on “Continue” to start installation.

Welcome to WordPress. Before getting started, you will need to know the following items.

1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one WordPress in a single database)

This information is being used to create a `wp-config.php` file. **If for any reason this automatic file creation does not work, do not worry. All this does is fill in the database information to a configuration file. You may also simply open `wp-config-sample.php` in a text editor, fill in your information, and save it as `wp-config.php`.** Need more help? [Read the support article on wp-config.php](#).

In all likelihood, these items were supplied to you by your web host. If you do not have this information, then you will need to contact them before you can continue. If you are ready...

Let's go!

Click on "Let's go!".

Below you should enter your database connection details. If you are not sure about these, contact your host.

Database Name	<input type="text" value="wordpress"/>	The name of the database you want to use with WordPress.
Username	<input type="text" value="username"/>	Your database username.
Password	<input type="text" value="password"/>	Your database password.
Database Host	<input type="text" value="localhost"/>	You should be able to get this info from your web host, if localhost does not work.
Table Prefix	<input type="text" value="wp_"/>	If you want to run multiple WordPress installations in a single database, change this.

Submit

Now, you need to enter your database details.

Database name: The name of the database.

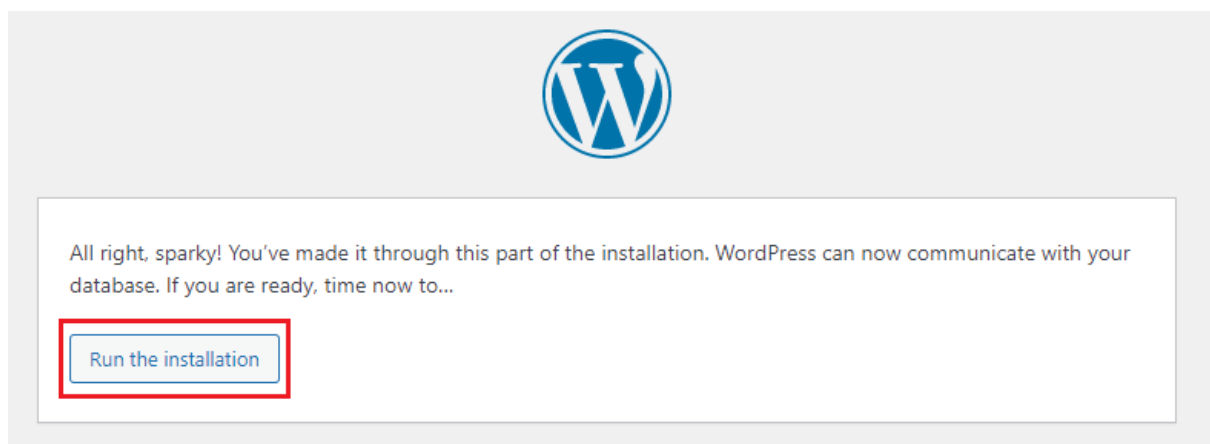

Username: Your database username.

Password: Your database password.

Database Host: localhost (Default)

Table Prefix: wp_ (Default)

After filling all database details click on “Submit” button.

Click on “Run the installation” to continue.

You need to provide the following information. You can always change these settings later.
